CORRECT ASSEMBLY OF THE 0-90 DEGREE CLEVIS

The following assembly instruction is the **ONLY** approved method to install the 0-90 Degree Clevis onto the GeneSys HAT Mount.

- ❖ Note that the arched slots on the inside are from the bottom toward rear and up. The tilt adjustment lever is in the center set of holes, and is on the passenger side. This configuration allows the user to adjust the unit to a comfortable viewing angel, while protecting the keyboard from being damaged by the mount or Docking Station.

The front edge of the "L" Bracket can touch the outer housing of the TG3 keyboard, but will not allow it to touch the keys and/or cause any damage.
